

PRESSURE RATED
BRONZE, IRON
AND DUCTILE
IRON VALVES *

BIDV-0621

Effective June 14, 2021 • Supersedes BIDV-0321 of March 22, 2021

*Including Alloy and Silent Check Valves

Prices and MTO status subject to change without notice.

|  <p>De-alloying corrosion, known as "Dezincification," was effectively eradicated from valve products in the 1950s. Today, however, this problem has returned with the increased use of high-zinc alloys (commonly referred to as 'Yellow Brass') in forged and cast valves typically produced outside the United States.</p> <p>Dezincification selectively removes zinc from the alloy, leaving behind a porous, copper-rich structure that has little mechanical strength. The physical attributes of an in-service valve with Dezincification includes a white powdery substance or mineral stains on its exterior surface.</p> <p>What's the cure? On all bronze valves the metal components in the waterway must not contain more than 15% zinc in their chemical makeup. As a standard NIBCO bronze pressure-rated valves are made to be "Dezincification Resistant," which is a seal of quality and longevity.</p> <p>This key is a guide only and is not intended to infer that any valve will be produced that is contained in the key.</p> | | | | | | | |
